

Stevanato Group

The world-class solution for hazardous injectable drugs

Stevanato Group's know-how in visual inspection and high-value-added drug containment solutions joins forces with IL Group's advanced labeling technology and equipment to offer an integrated system capable of raising performance and safety levels in the production and handling of hazardous injectable drugs.

A perfect match for the process: An all-in-one solution for reduced TCOs

Combining Stevanato Group's innovative **Vision Robot Unit (VRU)** with IL Group's **labeling equipment** enables an efficient human-like inspection and labeling of glass containers without the need for human interventions. Automated and smooth handling contributes to increase production efficiency and protect operators.

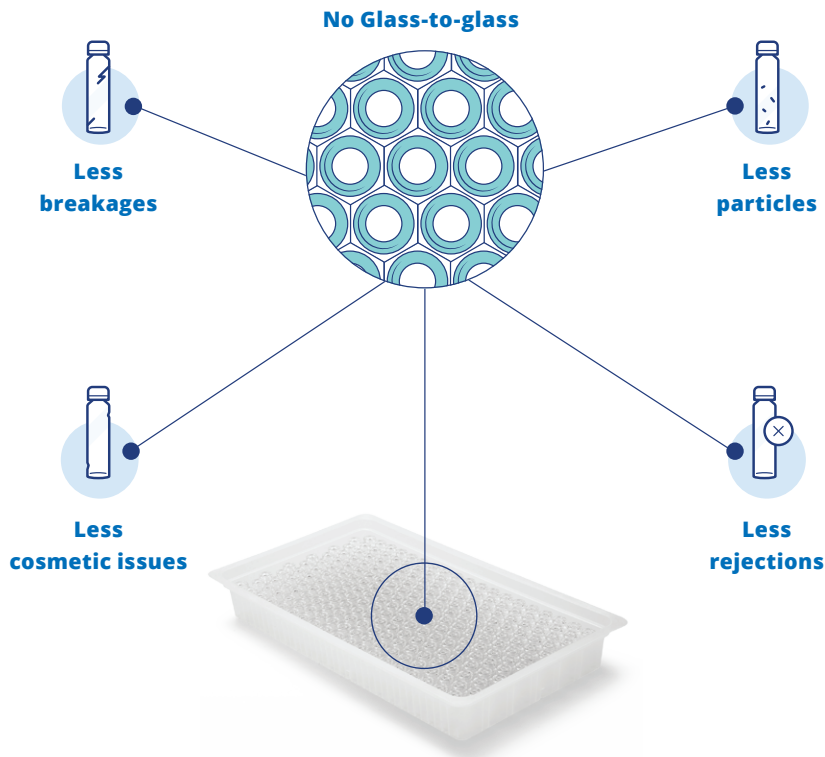

The world-class solution for hazardous injectable drugs

A perfect match for the product:
Enhanced quality and safety,
all at your fingertips

Stevanato Group's pre-sterilized **EZ-fill® vial platform** featuring no glass-to-glass contact, together with IL Group's **Vial Protect Pack (VPP)**, whose plastic cup protector and shrink label cover minimize the risk of breakage and prevent the contents spilling – increase operator protection and mitigate production risks.

KEY FEATURES

Enhanced safety and quality: EZ-fill® technology, VRU robotic smooth handling and VPP labeling features improve containers' integrity, reduce breakage risks, and avoid direct contact with hazardous drugs.

Total cost of ownership reduction: the integrated solution coupling high-performance inspection with advanced labeling techniques can process ready-to-use containers, streamlining production flows.

Protection against UV light: different film options enable protection for sensitive drugs.
